Reveal Answer

What am I looking at?

A dolphin!

Dolphins do not drink water like we do because most of the water they swim in is saltwater. Instead, dolphins get all of the water they need from the fish they eat.

Reveal Answer

What am I looking at?

Jellyfish!

Jellyfish can clone themselves. If a jellyfish is cut in two, the pieces of the jellyfish can regenerate and create two new jellyfish.

Reveal Answer

What am I looking at?

An Octopus

The only hard structure in an octopus' body is their beak, which looks like a parrot beak. They use their beaks for eating.

Reveal Answer

What am I looking at?

A shark!

Shark skin is made of tiny, hard, tooth-like structures called placoid scales. They are shaped like curved, grooved teeth and make the skin a very tough armour with a texture like sandpaper.

Reveal Answer

What am I looking at?

A starfish!

Starfish do not have a brain. They also do not have blood like other animals. Instead of blood, sea water circulates through their body with the help of sieve plate.
